

Infodemiology Early Warning System

Weekly Outbreak Intelligence Report
Generated: 2026-05-27 16:38

Executive AI Summary

This reporting period detected 17 outbreak-related anomaly signals across monitored regions. 11 critical outbreak alerts were identified, requiring immediate monitoring and response coordination. The most prominent disease signal involved dengue fever, with elevated anomaly activity observed in monitored datasets. Google Trends, Reddit symptom discussions, WHO surveillance, and AI prediction models contributed to risk assessment. Continued surveillance is recommended to monitor emerging outbreak patterns and seasonal disease activity.

Forecasting Outlook

7-Day Outbreak Risk: **HIGH**

30-Day Outbreak Probability: **90**

Seasonal Outbreak Likelihood:
Elevated seasonal transmission risk detected.

Seasonal Intelligence

Influenza activity typically increases during colder seasonal periods and high population mobility. Malaria transmission risk often increases during rainy seasons due to mosquito breeding conditions. Dengue outbreaks frequently intensify during humid and monsoon conditions. COVID-19 transmission remains sensitive to mobility patterns, indoor gatherings, and regional healthcare response conditions.

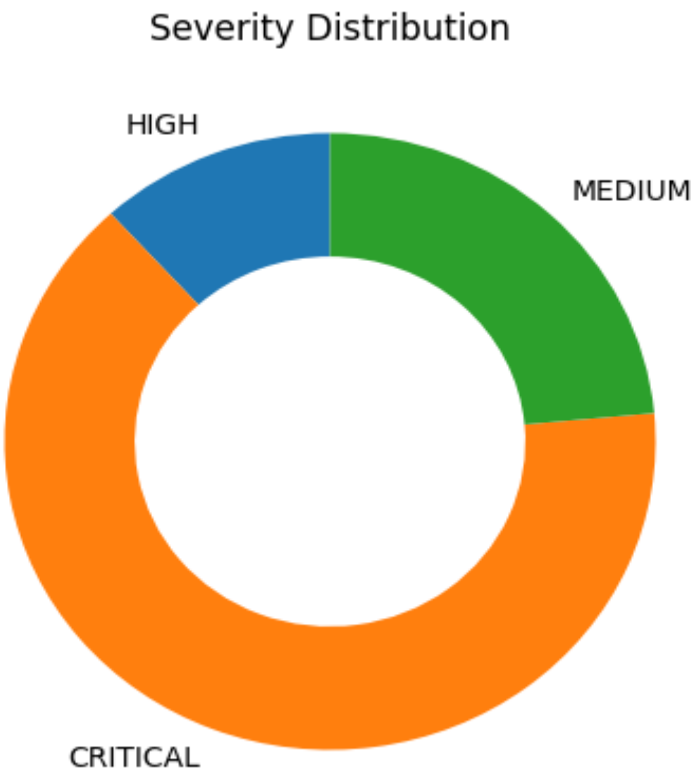

Disease	Country	Source	Severity	Risk Score
Influenza	India	Google Trends	HIGH	82.5
COVID-19	South Africa	WHO	CRITICAL	96.1
Malaria	Malawi	AI Prediction	MEDIUM	71.4
Dengue	Brazil	Reddit	HIGH	89.7
skin rash	Malawi	Google Trends	MEDIUM	98.95
fever	South Africa	Google Trends	MEDIUM	57.0
dengue fever	South Africa	Google Trends	MEDIUM	100.0
Unknown	Unknown	WHO	CRITICAL	95.0
Ebola	United States	WHO	CRITICAL	95.0

Unknown	Unknown	WHO	CRITICAL	95.0
Unknown	United States	WHO	CRITICAL	95.0
Unknown	Unknown	WHO	CRITICAL	95.0
Ebola	Germany	WHO	CRITICAL	95.0
Unknown	Unknown	WHO	CRITICAL	95.0
Ebola	United States	WHO	CRITICAL	95.0
Unknown	Germany	WHO	CRITICAL	95.0
Ebola	United States	WHO	CRITICAL	95.0

AI Recommendations

- Increase surveillance in high-risk countries.

- Monitor disease spread across neighboring regions.
- Continue anomaly monitoring every 15 minutes.
- Investigate abnormal Google Trends spikes.
